CONTENTS

INTRODUCTION

PRODUCT OVERVIEW

KWizCom Resource Translator enables you to easilly translate any KWizCom add-on for SharePoint 2010/2013, to your desired language.

Actually, this utility translates any .NET resource file (.resx) by using the Microsoft Translation Services.

To use this utility you will have to run it on a machine that has Internet access.

INSTALLATION GUIDE

SOFTWARE REQUIREMENTS

CLIENT REQUIREMENTS
Windows 7, Windows 8, Windows 2003, Windows 2008

INSTALLATION PROCEDURE

1. Download the product's latest version (zip file) from KWizCom's internet web site.
2. Extract Extract the zip file on your PC/Server.
3. Run the .msi installation file.

POST INSTALLATION

### SIGNING UP FOR MICROSOFT TRANSLATOR

The KWizCom Resource Translator uses Microsoft Translation Services. Before using the utility you need to sign up for Microsoft Translation Services and get your credentials.
To do that, go to: http://blogs.msdn.com/b/translation/p/gettingstarted1.aspx and follow instructions.

USING THE KWIZCOM RESOURCE TRANSLATOR

INITIAL SETUP

1st time you'll start the utility, you will see the Settings popup window:

You are required to type your Microsoft Translator *Client ID* and *Client Secret* in order to sign in for the Microsoft Translation Services (you got these when you signed up for the Microsoft Translation Services – see "Post Installation" section above).

After you enter your credentials and click "Save" your credentials will be validated and then you can get started working with the utility.
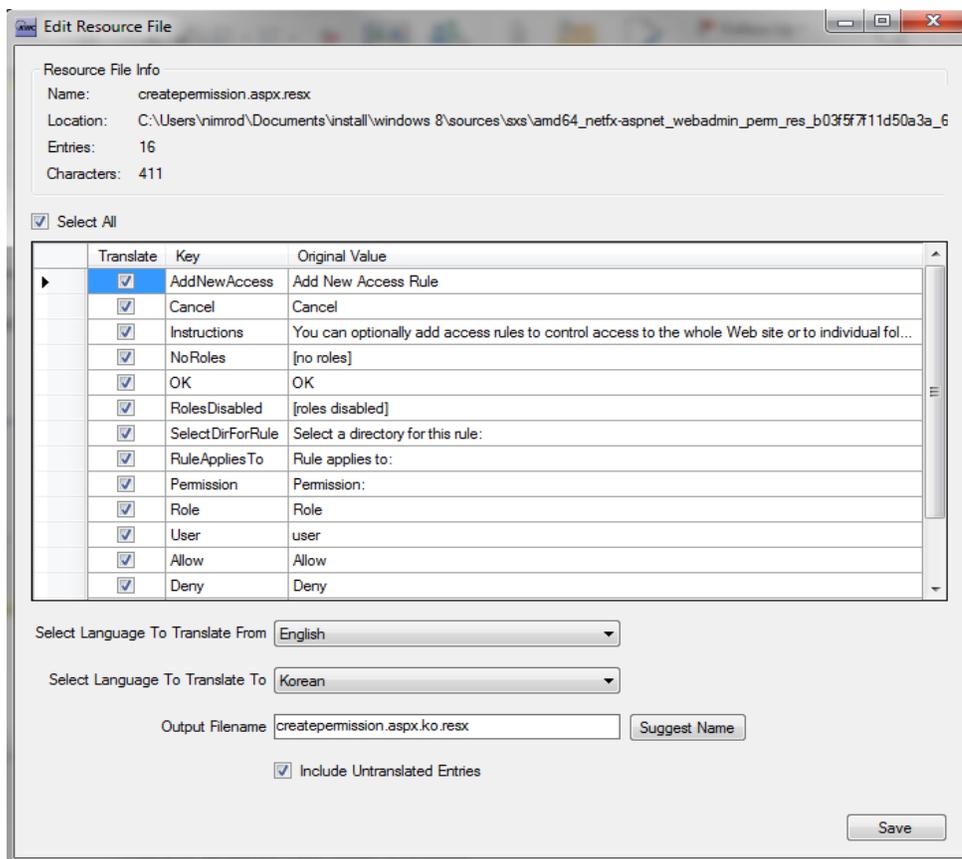

TRANSLATING RESOURCE FILES

After your credentials were validated, you'll see the main utility window:

To translate required resource files:

(1) Click the "Browse" button to select the resource file/s that you want to translate.
For KWizCom add-ons, These resource files are located on your SharePoint server, in the same location where SharePoint's resource files are located: Below the "14" hive (in SharePoint 2010) or "15" hive (in SharePoint 2013), inside the "Resources" folder.

(2) After you select your files they will appear in the resource files list.

(3) You now need to setup translation settings for each of the selected resource files. To edit resource file translation settings select it and then click the "Edit" link (below the list).
The following popup window will open:

Here you see all the strings included in the resource file. What you have to do it:

a. Select the strings that you want to translate (or click the "select all" checkbox)

b. Select source and target languages.

c. Type the name of the target translated resource file (or better just click the "Suggest Name" button).

d. Click "Save" to save those translation settings.

You should repeat these steps for each of the resource files on your list.

(4) Select the output folder whre the translated files should be created.

(5) Unless you've completed steps (1)-(3), you will see a blinking near the "Translate" button. Hover over this icon to see which settings are still missing.

(6) Click the "Translate" button to start the translating process.
At this step the utility will call the Microsoft Translation Services to translated your selected resource files.
